

## AH-103 - Left Hinge

**Spare Part Number:** AH-103

**Net Weight:** 0.00kg

**Net Dimensions:** 0.00cm x 0.00cm x 0.00cm

### Description

## AH-102 Left Hinge

A hinge is a machine element that connects two bodies allowing angular movement about a fixed axis of rotation, all the while preventing translations and rotations on the remaining two axes. A hinge can be considered as a journal bearing with only one degree of freedom where a shaft is rotating in a hole. Hinges only allow one rotation, either yawing (the most common), pitching, or rolling.

HETTICH, L.50 x 1.40 mm
