Description

CP-118 Servo Drive (this component needs to be preset in the factory)

Electronic device that translates low-energy command signals from a controller into high-energy voltage and current delivered to a servo motor. The command signal can represent the desired position, velocity or torque. The servo drive monitors feedback on the motor and automatically adjusts its output to correct for differences between the commanded value and actual.

G-Series servo drive, 1~ 200 VAC, MECHATROLINK II integrated, 750 W
